	<p>42. Once you have written your program ,you have to test it with sample data to see if there are any bugs or errors.</p> <p>43. A buffer is an area in a computer's memory where information can be stored for a short time.</p> <p>44. Translation is moving an object along an axis to somewhere else in the viewing area.</p> <p>45. The language used to create the majority of text files on the Web is HTML .</p>	
	<p>متن زیر را به دقت خوانده و بر اساس متن به سؤالات داده شده با جملات انگلیسی پاسخ دهید .</p> <p style="text-align: center;">MONITOR</p> <p>The monitor is primarily an output device. It converts electronic signals from the computer into a visual display that is the result of processing information. The video adapter is an expansion card that plugs into the motherboard. The adapter changes the instructions from the central processing unit (CPU) into a way that the monitor can understand it.</p> <p>Within the monitor there are red, green, and blue electron guns. Each one shoots out a stream of electrons which all come together to form pixels on the screen. Monitors have some features that are similar to a television set. There are controls that allow for brightness and contrast, and also the ability to turn the monitor on and off even while the computer is running.</p> <p>The size of the monitor is determined by measuring diagonally across the screen. Most monitors are 14" and 15". Today, most systems are sold with a display adapter that connects to a PCI "local bus", supports some Windows accelerator, and provides SVGA resolutions. The "local bus" means that the CPU can send data to the card at high speed. The video display adapter is also called the video card or graphics card.</p> <p>Elements of the Video Display Adapter:</p> <ul style="list-style-type: none"> • Resolution : is determined by the number of colors and the amount of video memory • Color Depth :number of colors determined by the number of bits assigned to hold color value. • Refresh Rate : the speed that the display uses to paint the dots on the screen. • Accelerator : means the display adapter can draw line and boxes and can move windows and scroll itself. <p>46. What does the monitor do ? (0.5) 47. How monitors are similar to a television set ? (1) 48. What does the "local bus" mean ?(1)</p>	۲/۵
